STATUS

On the 2026–27 academic job market. U.S. Permanent Resident, no visa sponsorship required.

RESEARCH INTERESTS

I work on building **reliable AI systems**. My research follows three directions:

- **Trustworthy LLM Generation and Agents** **(NeurIPS'26 ×5, ICML'26 ×2, ICLR'26, AAAI'26 ×2, WWW'26, ACL'26, etc.)**
- **Multimodal and Multi-Domain Representation Learning** **(NeurIPS'25, SIGIR'26, KDD'25 ×2, ICML'25, ACM MM'25 ×2, etc.)**
- **Federated and Efficient Learning** **(NPJ AI'26, ICCPS'25, EMNLP'25, etc.)**

My long-term goal is **Translational AI Systems**: deploying these methods in healthcare, buildings, finance, software and recommendation, etc. I build and test this work with clinicians, building engineers, developers and platform teams. Parts of this work now run in open source (FinRL, Harbor) and in a recommendation system used by hundreds of millions of people.
